Investment Option Detail Sheet

Government/Credit
Bond Index

The Fund attempts to match the performance of the Barclays Capital Government/Credit Bond Index. The Fund may be suitable for investors seeking a slightly higher return with moderate risk, who are not seeking long-term growth potential.

Fund descriptions and the fund's top ten holdings are updated approximately every 6 months.

For information on available investment options, please visit our Web site at www.state.ak.us/drb. Under "Programs", click on the "Defined Contribution Retirement Plan" line; then on the next page, under "Publications", click on "Investment Option Detail Sheets". Please Note: Adobe Acrobat Reader is required to download and view Investment Option Detail Sheets. You can print a copy of any sheet directly from your Web browser; if you are unable to do so, please call DRB at 1-800-821-2251 or 465-4460 from Juneau.

Investment Objective

To provide high current income and some potential for capital appreciation while minimizing risk through a highly diversified portfolio of high-quality U.S. fixed-income securities.

How The Fund Works

The Fund buys and holds portfolios of the securities included in the Barclays Capital Government/Credit Bond Index. The Fund seeks to closely match the Index's total rate of return.

Investor Profile

The Fund is appropriate for those investors who seek a higher rate of return than a money market fund, with moderate risk. The Fund may not be able to provide the long-term growth potential of an all-stock investment.

Fund Benchmark

The Barclays Capital Government/Credit Bond Index is composed of high-quality, investment-grade U.S. Government and corporate fixed-income securities with maturities greater than one year.

Fund Management

The Fund is a passively managed, modular fund that buys and holds representative portfolios of the securities included in the Barclays Capital Government/Credit Bond Index. The Fund holds 2,966 of the 3,532 issues in the Index, in order to match the Index's important risk/return characteristics such as quality, industrial sectors, cash flow structure and callability. Securities are not traded based on subjective opinions about interest rates, individual issues or industries.

The Fund holds intermediate and long-term debt obligations with more than \$150 million outstanding. Since intermediate and long-term debt securities tend to pay higher rates of interest than short-term debt securities, the average yield to maturity of the Fund's securities is somewhat higher than that of a shorter-term bond fund.

The Fund may appreciate in price when interest rates decline, and this price appreciation can add to the Fund's total rate of return. Coupon rates of debt securities are tied to interest rates. When interest rates decline, debt securities with higher coupons than those that are currently being issued become more attractive to investors. As a result, their prices increase and a portfolio of debt securities, such as the Fund, can appreciate in value. Conversely, the Fund may depreciate in price when interest rates rise, and this price depreciation can subtract from the Fund's total rate of return.

¹An index is not professionally managed, does not have a defined investment objective, and does not incur fees or expenses. Therefore, performance of an index fund will generally be less than its benchmark index. You cannot invest directly in an index.

BlackRock Institutional Trust Company, N.A. is registered as an investment adviser under the Investment Advisers Act of 1940.

IMPORTANT NOTE: Whenever you initiate a trade, there is a possibility the fund company may reject or delay your trade due to a number of circumstances due to extreme market conditions. If a trade is rejected, then the dollar amount will be reinvested in the original fund at the next calculated unit/net asset value after the trade is rejected. This can cause a gain or loss to your account, when units/shares are repurchased on a different day.
