an ACS company 

Agenda

- Purpose
- About Actuarial Assumptions
- Economic Assumptions
- Decremental Assumptions
- Other Demographic Assumptions
- Postemployment Healthcare Assumptions
- Impact of Proposed Changes on Plan Costs
- Questions
- Appendix

Purpose

- To compare actual plan experience with actuarial assumptions used in the valuation
- Changes in assumptions are recommended if:
 - Sufficient data is available which shows a material difference between expected and actual experience
 - Future experience is likely to be different given recent trends
- Provide a better measurement of a pension plan's actuarial position

About Actuarial Assumptions

- Used to forecast future events that impact amount and value of future benefit payments
- Should be a realistic “best guess” based on:
 - Past history
 - Future expectations
- Appropriately conservative given the Board’s fiduciary responsibility
- Should be explicit - each assumption individually reasonable
- Setting of assumptions is a blend of art and science

Assumption Types

- Economic
- Decremental
- Other Demographic
- Postemployment Healthcare

Frequency

- PERS and TRS last performed an experience analysis of assumptions in October 2000
- Based on statute, the Alaska Retirement Management Board policy is to perform this analysis at least every four years
- Most systems perform this type of analysis every 3-6 years

Economic Assumptions

buck

explore
excellencesm

buckconsultants
an ACS company 

Economic Adjustments

- Inflation should be consistently applied to:
 - Investment return
 - Salary increases
 - COLA's
- Real returns should reflect asset mix
 - The majority of the return is the result of asset allocation
- Assumptions should
 - Reflect benefit payment period (i.e., long-term over 40-50 years)
 - Consider recent trends
 - Consider future expectations

Understanding Economic Assumptions

$$\begin{aligned} & \text{Investment Return Rate} \\ & - \text{Inflation Rate} \\ & \hline & = \text{Real Rate of Return} \end{aligned}$$

Investment Return Rate determines how much money we think we'll have.

Inflation Rate tells us what we think it will buy.

Real Return is the reason to pre-fund benefit payments.

Inflation Experience (1957 - 2006)

<u>Ten-Year Period Ending</u>	<u>Actual Annual Rate</u>
01/01/1966	1.78%
01/01/1976	5.80%
01/01/1986	6.77%
01/01/1996	3.62%
01/01/2006	2.60%
50-Year Mean	4.11%
Assumed Rate	3.50%

No change recommended.

Development of Investment Return Assumption

- Building Block Method used

Asset Class	Real Rate of Return	Current Policy (Resolution 2006-11)	
		Allocation %	Real Return
Cash & Short-Term Fixed Income	1.00%	0%	0.00%
Domestic	2.50%	20%	0.50%
High Yield	3.25%	2%	0.07%
International	2.00%	2%	0.04%
Equity			
U.S. Large Cap	5.75%	30%	1.73%
U.S. Small Cap	6.75%	6%	0.41%
International	6.25%	14%	0.88%
Private Equity	8.00%	7%	0.56%
Emerging Markets	7.00%	2%	0.14%
Other (Limited Partnership)	7.00%	3%	0.21%
Real Estate	4.25%	10%	0.43%
Absolute	4.50%	4%	0.18%
Total		100.0%	5.15%
Inflation			3.50%
Gross Return			8.65%
Administrative Expenses			(0.06)%
Conservatism			(0.34)%
Assumed Rate of Return			8.25%

No change recommended.

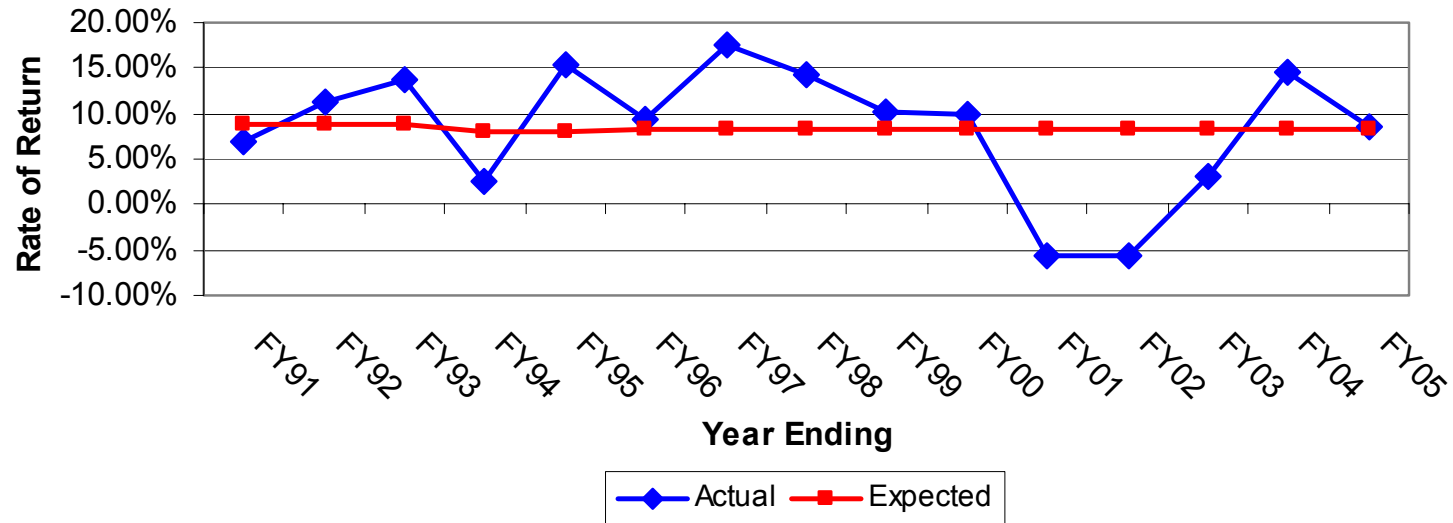

Summary of Economic Assumptions

	TRS*	PERS Others*	PERS Peace Officer/ Firefighter	
	Current Assumptions			New Assumptions
Investment Return	8.25%	8.25%	8.25%	8.25%
Inflation	<u>3.50%</u>	<u>3.50%</u>	<u>3.50%</u>	<u>3.50%</u>
Real Rate of Return	4.75%	4.75%	4.75%	4.75%
Interest on Contributions	4.50%	4.50%	4.50%	4.50%
Salary Increases				
- Inflation	3.50%	3.50%	3.50%	3.50%
- Productivity	<u>0.50%</u>	<u>0.50%</u>	<u>1.00%</u>	<u>0.50%</u>
- Economic Portion	4.00%	4.00%	4.50%	4.00%

****No changes recommended.***

Decremental Assumptions

explore
excellencesm

buckconsultants 
an ACS company A C S

Decremental Adjustments

- Used to quantify the amount of expected future benefit payments
- Generally should follow experience with some conservatism (i.e. margin)
- Consider previous experience analysis results
- Watch trends (e.g., improving mortality)
- There is no one right set of assumptions
- Factor in special events during investigation period (e.g., early retirement window, change in benefit eligibility, negotiated salary increases)
- Actuarial mathematics is a science, but its application in the real world is an art!

Summary of Assumption Recommendations

Preretirement Healthy Mortality

	Current	Proposed									
TRS	Healthy mortality based on the sex distinct 1994 GAM Table, 1994 Base Year <table border="0"> <tr> <td></td> <td style="text-align: center;"><u>Male</u></td> <td style="text-align: center;"><u>Female</u></td> </tr> <tr> <td>Actual number:</td> <td style="text-align: center;">20</td> <td style="text-align: center;">25</td> </tr> <tr> <td>Expected number:</td> <td style="text-align: center;">33</td> <td style="text-align: center;">38</td> </tr> </table>		<u>Male</u>	<u>Female</u>	Actual number:	20	25	Expected number:	33	38	Male mortality rates decreased by 40% Female mortality rates decreased by 45%
	<u>Male</u>	<u>Female</u>									
Actual number:	20	25									
Expected number:	33	38									
PERS Others	Healthy mortality based on the sex distinct 1994 GAM Table, 1994 Base Year <table border="0"> <tr> <td></td> <td style="text-align: center;"><u>Male</u></td> <td style="text-align: center;"><u>Female</u></td> </tr> <tr> <td>Actual number:</td> <td style="text-align: center;">65</td> <td style="text-align: center;">47</td> </tr> <tr> <td>Expected number:</td> <td style="text-align: center;">148</td> <td style="text-align: center;">102</td> </tr> </table>		<u>Male</u>	<u>Female</u>	Actual number:	65	47	Expected number:	148	102	Male mortality rates decreased by 58% Female mortality rates decreased by 58%
	<u>Male</u>	<u>Female</u>									
Actual number:	65	47									
Expected number:	148	102									
PERS Peace Officer/ Firefighter	Healthy mortality based on the sex distinct 1994 GAM Table, 1994 Base Year <table border="0"> <tr> <td></td> <td style="text-align: center;"><u>Male</u></td> <td style="text-align: center;"><u>Female</u></td> </tr> <tr> <td>Actual number:</td> <td style="text-align: center;">4</td> <td style="text-align: center;">1</td> </tr> <tr> <td>Expected number:</td> <td style="text-align: center;">17</td> <td style="text-align: center;">2</td> </tr> </table>		<u>Male</u>	<u>Female</u>	Actual number:	4	1	Expected number:	17	2	No changes
	<u>Male</u>	<u>Female</u>									
Actual number:	4	1									
Expected number:	17	2

- Tables on pages 63, 72 and 79

Summary of Assumption Recommendations

Retirement

	Current		Proposed
TRS	Various rates, ages 50 to 66.		Separate rates for employees eligible for reduced versus unreduced retirement. Generally, rates increased for reduced and unreduced retirement with unreduced retirement rates higher than those for reduced retirement. Different rates for males and females.
		<u>Male</u> <u>Female</u>	
	Actual Reduced:	84 207	
	Expected Reduced:	42 96	
	Actual Unreduced:	480 774	
	Expected Unreduced:	238 371	

See Experience Analysis Report:

- Graphs on pages 24-25
- Table on page 78

Summary of Assumption Recommendations

Retirement Cont'd

	Current		Proposed
PERS Others	Various rates, ages 50 to 68.		Separate rates for employees eligible for reduced versus unreduced retirement. Generally, rates increased for reduced and unreduced retirement with unreduced retirement rates higher than those for reduced retirement. Different rates for males and females.
	<u>Male</u>	<u>Female</u>	
Actual Reduced:	472	616	
Expected Reduced:	403	450	
Actual Unreduced:	1,258	1,299	
Expected Unreduced:	656	763	

See Experience Analysis Report:

- Graphs on pages 26-27
- Table on page 70

Summary of Assumption Recommendations

Retirement Cont'd

	Current		Proposed
PERS Peace Officer/Firefighter	Various rates, ages 50 to 65.		Separate rates for employees eligible for reduced versus unreduced retirement. Generally, rates increased for reduced and unreduced retirement with unreduced retirement rates higher than those for reduced retirement. Different rates for males and females.
	<u>Male</u>	<u>Female</u>	
Actual Reduced:	78	14	
Expected Reduced:	51	13	
Actual Unreduced:	345	57	
Expected Unreduced:	123	19	

See Experience Analysis Report:

- Graphs on pages 28-29
- Table on page 62

Summary of Assumption Recommendations

Salary Scale

	Current	Proposed
TRS	5.5% for the first 5 years of service and 4% thereafter	6% for the first 6 years of service grading down to 4% between 7 and 15 years and then 4% thereafter
PERS Others	5.5% for the first 10 years of service and 4% thereafter	5-year select period and age based rates grading down from 5% to 4%
PERS Peace Officer/Firefighter	6% for the first 5 years of service and 4.5% thereafter	6.5% for the first 6 years of service and then 4.5% thereafter

See Experience Analysis Report:

- Graphs on pages 44-46
- Tables on pages 64, 71 and 80

Other Demographic Assumptions

Other Demographic Assumptions

		Current		Proposed	
		Male	Female	Male	Female
Percent Married*	TRS	N/A	N/A	85%	75%
	PERS Others	N/A	N/A	80%	70%
	PERS Peace Officer/Firefighter	N/A	N/A	80%	70%
Age Difference	TRS	4 years older	4 years younger	3 years older	3 years younger
	PERS Others	4 years older	4 years younger	3 years older	3 years younger
	PERS Peace Officer/Firefighter	4 years older	4 years younger	3 years older	3 years younger

**Marital status currently determined by the actual marriage status on the valuation data*

See Experience Analysis Report:
Pages 35-39

Other Demographic Assumptions (cont'd)

		Current	Proposed
Alaska Residency	TRS	65%	60%
	PERS Others	68%	60%
	PERS Peace Officer/Firefighter	68%	60%
Service Earned During the Year for Part-time Employees	TRS	0.55	0.55
	PERS Others	0.60	0.65
	PERS Peace Officer/Firefighter	0.60	1.00

See Experience Analysis Report:
Pages 35-39

Other Demographic Assumptions (cont'd)

		Current		Proposed	
		Death	Disability	Death	Disability
Occupational vs. Nonoccupational Death and Disability	TRS	0%	N/A	0%	N/A
	PERS Others	35%	35%	50%	50%
	PERS Peace Officer/Firefighter	85%	85%	75%	75%

See Experience Analysis Report:
Pages 35-39

Other Demographic Assumptions (cont'd)

- Number of Dependent Children
 - Currently, we assume all married employees have a dependent child forever.
 - We propose that all married employees have 2 dependent children from age 25 through age 45. At 46, no children.
- Number of Unused Sick Days (TRS only)
 - Currently, we assume that a member will receive 4.7 days for each year of service. This effectively increases the liability by 2.73%.
 - Due to a lack of available data, we do not recommend a change to this assumption.

See Experience Analysis Report:
Pages 35-39

Other Demographic Assumptions (cont'd)

Actuarial Cost Methods

- Current Method – Projected Unit Credit
 - Benefits are funded as they accrue resulting in an increasing normal cost
 - Initial unfunded liability and future gains/losses amortized over a fixed 25 years as a level percentage of payroll
- Proposed Method – Entry Age Normal
 - Normal cost is determined as a level percentage of pay per participant over their entire career, resulting in a more stable normal cost
 - The unfunded liability is adjusted by actuarial gains/losses each year and is amortized over a specified period (such as 25 years) ***without an increasing payroll***
 - Most common method used by public systems. 72% of state retirement systems use this method according to two recent reputable surveys
- Entry Age Normal Method is recommended for all plans

Postemployment Healthcare

explore
excellencesm

buckconsultants 
an ACS company A C S

OPEB Healthcare Cost Adjustments

- Used to quantify the amount of expected future benefit payments
- Blend of past experience and expected future costs
- Medical and prescription costs are analyzed separately
- Consider impact of Medicare
 - Costs are different for pre-65 and post-65 populations
 - For medical costs, retirees eligible for Medicare Parts A and B will cost less than retirees eligible for Part B only
 - Medicare Part D impacts the prescription costs for the Post-65 population
- Consider impact of aging (a retiree age 60 will cost more than a retiree age 50)
- Medical inflation (trend) is higher than general inflation

Healthcare Costs with Respect to Medicare

	Current	Proposed
Medical Pre-65	\$8,328	\$8,497
Medical Post-65 – Medicare Part B Only	1,507	1,732
Medical Post-65 – Medicare Part A and B	1,507	866
Prescription Drug Pre-65	1,936	2,113
Prescription Drug Impact of Medicare Part D	414	452
Prescription Drug Post-65	1,522	1,661
