Re: Request for amendment of Disposal Injection Order No. 12

Dear Ms. Platt:

By letter dated April 18, 2003, BP Exploration (Alaska) Inc. requested amendment of Disposal Injection Order No. 12, Rule 4. The subject Order is so amended to read:

Rule 4 Surveillance

A baseline temperature survey from surface to total depth, initial step rate test to pressures equal or exceeding maximum injection pressure, and pressure falloff are required prior to initiation of disposal injection. Regular fill depth tags are required annually while drilling operations are ongoing, once every two years after drilling operations have concluded, or as warranted following consultation with the Commission. Operating parameters including disposal rate, disposal pressure, annuli pressures, and volume of solids pumped must be monitored and reported according to requirements of 20 AAC 25.432.

An annual performance report will be required including rate and pressure performance, surveillance logging, fill depth if determined, survey results, volumetric analysis of disposal storage volume, estimate of fracture growth if any, and updates of operational plans. Report submission will be on or about July 1.

DONE at Anchorage, Alaska and dated April 21, 2003.

Sarah H. Palin
Chair

Randy Ruedrich
Commissioner

BY ORDER OF THE COMMISSION

SCANNED JUN 30 2004
